

Student excursions

A great way to get to know ASML

ASML is one of the world's leading suppliers of lithography systems for the semiconductor industry, and what we're developing today will be used by microchip manufacturers in years to come. So you could say we're developing the future.

We organize excursions especially for engineering students (third year or higher).

You'll see thought-provoking presentations as well as our latest technical insights. And to acquaint you with our daily technical challenges, we will present a typical ASML case.

The program consists of a number of short presentations, visit of our Experience Center, a campus tour, a case study and informal drinks.

We welcome you at 09.45 and the day will finish around 17.15.

Scheduled excursions in 2018

Tuesday, May 15 2018 – Excursion Day for Belgian students : [register](#) here before May 9th.

Thursday, May 17 2018 – Mechanical Engineering : [register](#) here before May 14th.
